

Problem-Solution Fit

Date	11 July 2026
Team ID	
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	5 Marks

Problem-Solution Fit Canvas:

Use the framework below to ensure your proposed solution accurately addresses the root causes, behaviors, and limitations of your target audience. Fill out the canvas in the respective boxes just like the original visual template.

1. CUSTOMER SEGMENT(S) [CS] ☐ Government policy makers. ☐ Research analysts and economists. ☐ NGOs and international development organizations. ☐ Students and researchers working on development studies.	6. CUSTOMER LIMITATIONS EG. BUDGET, DEVICES [CL] • Limited knowledge of Machine Learning. • Limited computing resources. • Time constraints for manual analysis. • Difficulty understanding large datasets. • Dependence on publicly available data.	5. AVAILABLE SOLUTIONS PROS & CONS [AS] UNDP Reports • Pro: Official and reliable HDI data. • Con: No prediction capability; manual analysis required. World Bank Data • Pro: Comprehensive socio-economic indicators. • Con: Requires data preprocessing and technical expertise. Spreadsheet Analysis
---	--	---

		• Pro: Easy to use for small datasets. • Con: Time-consuming and not suitable for predictive analysis.
2. PROBLEMS / PAINS + ITS FREQUENCY [PR] ☐ Manual HDI analysis is time-consuming (daily). ☐ Comparing development indicators across countries is difficult (frequently). ☐ Large datasets require extensive preprocessing (daily). ☐ Identifying development trends is complex (weekly). ☐ Delayed decision-making due to lack of automated prediction (frequently).	9. PROBLEM ROOT / CAUSE [RC] ☐ HDI depends on multiple socio-economic indicators. ☐ Manual processing of large datasets is slow. ☐ Existing tools do not provide intelligent HDI prediction. ☐ Data from different sources requires cleaning and preprocessing.	7. BEHAVIOR + ITS INTENSITY [BE] ☐ Frequently analyzes HDI datasets (high). ☐ Compares country indicators regularly (high). ☐ Generates reports for research and policy planning (medium-high). ☐ Uses prediction results for decision-making (high).
3. TRIGGERS TO ACT [TR] ☐ Need for faster policy decisions. ☐ Release of updated HDI datasets. ☐ Requirement for country development comparison. ☐ Research and academic analysis. ☐ Government planning and resource allocation.	10. YOUR SOLUTION [SL] Human Development Index (HDI) Prediction System—a Machine Learning-based web application that: • Predicts HDI category (Very High, High, Medium, Low). • Uses Life Expectancy, Mean Years of Schooling, Expected Years of Schooling, and GNI per Capita as inputs. • Provides fast and accurate predictions. • Displays results through a simple	8. CHANNELS OF BEHAVIOR [CH] ONLINE ☐ UNDP Data Center ☐ World Bank Open Data ☐ Kaggle ☐ Research websites ☐ Flask web application OFFLINE ☐ Government reports ☐ Research papers ☐ Academic institutions ☐ Policy meetings and seminars
4. EMOTIONS BEFORE ☐ Confused. ☐ Frustrated. ☐ Overwhelmed by large datasets. ☐ Uncertain about prediction accuracy.		

AFTER [EM]

- ☐ Confident.
- ☐ Informed.
- ☐ Satisfied with quick predictions.
- ☐ Better prepared for decision-making.

Flask-based web interface.

- Supports policymakers, researchers, NGOs, and students in development analysis and decision-making.
